## GLOVE TECHNOLOGIES

## Xtra Grip Technology

Managing oil and liquids

# Xtra Grip Technology

Secure grip. Excellent dexterity.

Outstanding durability. Natural wearer comfort.

uvex Profas Xtra Grip Technology reliably manages oil and liquids. The unique, multilayer design of the nitrile coating ensures an effective grip, while maintaining a high

level of flexibility and outstanding tactile feel and comfort. In addition, the robust design guarantees optimum durability. The Xtra Grip Technology is applied to selected

uvex Profas safety gloves that protect against mechanical or chemical risks.

uvex Profas PROFI ERGO XG 20A

uvex Profas RUBIFLEX XG 35B/27B

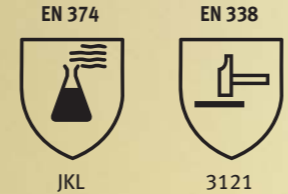

Flexibility and tactile feel

The PROFI ERGO XG 20A is the ideal choice for mechanical risks in oily and wet environments.

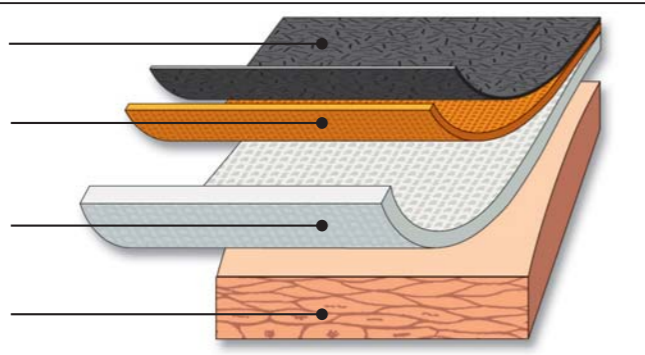

Flexibility and tactile feel

The supported RUBIFLEX XG 35B/27B is specifically designed for chemical protection.

## Multilayer design for greater liquid resistance and safety

- Special coating for optimum grip
- Strong nitrile coating
- Cotton layer for excellent wearer comfort
- Surface of skin

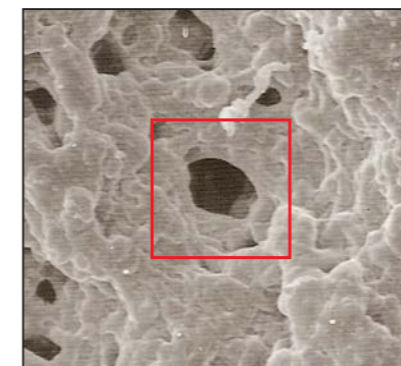

Xtra grip technology starts with a highly absorbent cotton liner for exceptional comfort and sweat management. Combined with a Nitrile coating the glove provides absolute impermeability, while maintaining excellent flexibility and comfort.

## Durability

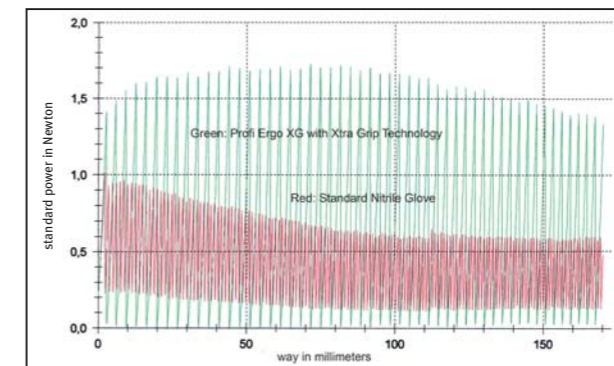

Together with the multilayer design, the advanced surface structure ensures a greater resistance to abrasion in the workplace.

## For use in oily and wet environments

The canal structure of the Xtra Grip Technology glove absorbs liquids, helping to maintain a secure grip on tools and components.

## Secure grip

Laboratory and practical tests confirm the increased grip of Xtra Grip Technology in comparison to traditional Nitrile coating methods.

MADE IN GERMANY
